

Audiometry Testing Program

A Corporate Health Management service.

Prevent loss & maintain the health of your workers hearing.

What is Audiometry Testing?

Corporate Health Management (CHM) understand the importance of audiometric testing in preventing hearing loss and maintaining the health of your workers, that is why we offer comprehensive in-clinic audiometric testing services.

Audiometry Testing is a diagnostic method that measures a person's hearing ability. This non-invasive test involves using specialised equipment to evaluate the minimum sound intensity or threshold that a person can hear.

It is a reliable and effective way to identify any hearing loss or damage caused by prolonged exposure to loud noises in the workplace.

As an employer, it is your responsibility to ensure the safety and health of your workers, including protecting them from hearing loss associated with noise exposure.

WHS Regulation 58 requires that workers frequently exposed to noise levels exceeding the exposure standard for noise must undergo audiometric testing.

When do workers need to have an Audiometry test?

Within 3 months of starting work

Early detection and management of hearing loss can significantly impact the quality of life of your workers, as well as their job performance.

Regular follow up test at least every 2 years

You demonstrate your commitment to their safety and well-being by prioritising their hearing health.

Compliance with WHS Regulation 58 can be challenging, however, by partnering with us, you can ensure your workers receive quality audiometric testing in accordance with AS1269.4:2014 standards to prevent hearing loss.

What does the Assessment Cover?

Our Audiometry Testing program covers a range of hearing-related assessments, including:

- Hearing threshold tests measure the softest sound a person can hear
- Speech audiometry tests measure a person's ability to hear and understand speech
- Tympanometry tests to assess the function of the middle ear
- Otoacoustic emission tests to determine the function of the inner ear

Assessment Options

Our Audiometry Testing program includes two options: hearing screening and hearing assessment.

Hearing Screening

Our hearing screening service is a quick and easy way to assess an employee's hearing ability. The screening is conducted by trained staff and involves a 15-minute appointment that includes air conduction tests only.

* this is a non diagnostic test and is not performed by a clinician

* if the results show signs of hearing loss, we recommend following up with a hearing assessment

Hearing Assessment

Our hearing assessment service is a more comprehensive assessment that includes air and bone conduction tests in a 30-minute appointment. The evaluation is conducted by a clinician who can interpret and explain the test results to the employee.

*this is a diagnostic test, performed by a clinician.

Contact us today to learn more about our in-clinic audiometric testing services and how we can support your compliance with WHS.

Partnership with Amplifon

Corporate Health Management is proud to offer a comprehensive hearing testing program in partnership with Amplifon.

Together we offer competitive pricing, and exceptional project coordination, service delivery, reporting and customer support.

Top-notch hearing testing services

That meet the needs of both employers and employees.

Over 200 locations throughout Australia

Making it convenient for employees to access their services.

Clinical expertise

Employees can feel confident that they are receiving high-quality hearing tests.

Why get Audiometric Testing?

Issues and challenges companies now face.

Organisation Risks

Audiometry testing Solutions

Compliance risks: Employers have a legal obligation to ensure the safety and health of their workers. Health regulations require workers frequently exposed to noise levels exceeding the exposure standard for noise to undergo audiometric testing.

CHM helps employers meet their compliance obligations and prevent hearing loss among workers through quality audiometric testing services. Failure to comply with this regulation can result in legal and financial penalties.

Productivity risks: Hearing loss can impair communication and understanding in the workplace, leading to misunderstandings, errors, and delays. This can result in reduced productivity and efficiency, negatively affecting an employee's job performance and potentially causing missed deadlines or quality issues.

Early detection and management of hearing loss through CHM's audiometric testing can prevent this. By identifying and addressing hearing loss, workers can experience a better quality of life, and workplaces can achieve enhanced productivity.

Reputation risks: The risk of reputational damage due to failure to provide a safe and healthy work environment for employees can have significant and lasting consequences for an organisation.

Prioritising hearing health and offering audiometric testing demonstrates employers' commitment to their employee's safety and well-being, enhancing their reputation as a responsible company.

Financial risks: Hearing loss claims can lead to significant financial losses for employers, including legal fees, compensation payments, and increased insurance premiums.

Implementing audiometric testing and assessment services enables employers to identify hearing problems early and take appropriate action to prevent further damage, thus reducing the likelihood of costly compensation claims.

Why Choose Audiometry Testing with CHM?

Our program provides each employee with their audiometric test results including a report from their provider.

Our detailed reports on employees' hearing ability, including recommendations, enable employers to identify any hearing problems early and take appropriate action to prevent further damage.

Our secure software archives the test results and produces automatic reminders for employees to get their test depending on when they meet the 2-year threshold, making it easy for employers to stay on top of their employees' hearing health.

With CHM's support team always available to answer any questions or queries related to audiometric appointments, test results or reports, you can have peace of mind knowing your employees are in good hands.

Trust CHM to help you comply with regulations, protect your employees' hearing health, and maintain a safe and healthy workplace.

Investment
